1 Introduction

Nowadays, 87% travelers and tourists use navigation apps and smartphones while traveling to new places. Cities across the globe are looking for new ways to offer useful information to tourists and people unfamiliar with the city for a pleasant and guided stay. Many cities have come up with their own apps for the guidance of such people. We aim to develop and design a similar app that will not only give travelers and tourists easy access to the Lahore city's points of interest. But also allow them to find and book the best place for their stay in the city.

3 Sprint Goal

Designing mockups of Lahore Tour Guide app reservation module where using Figma as our design tool. We will configure React Native and create a project and configure our project with Firebase. We will create front end for the designed screens. Further, by using Firebase Firestore, the database structure for our reservation module will be designed. Backend and Queries will also be implemented for respective screens.
